

## High Temperature Firesleeve – Industrial & Heavy Duty Silicone Rubber Coated Fiberglass Sleeve

Firesleeve is the standard protection for hoses and cables in harsh environments. Used in most industries with any hot process or welding operations to protect assets and prevent failures, prolonging the life of critical hoses, wires and cables.

The Heavy Duty sleeves are also used to cover water-cooled high current cables and cooling water hoses at metal processing plants due to the excellent molten metal splash protection. This sleeve is extremely flexible, pliable and conformable.

500°F / 260°C continuous rating with weld splatter / molten metal splash protection

Firesleeve: Industrial FS grade and Heavy Duty HD grade

Firesleeve is typically used to protect hydraulic hoses and cable assemblies. Industrial firesleeve is fabricated from a knitted E-type glass and the Heavy Duty Grade is fabricated from a dense E-type braided sleeve. Both the knitted and braided firesleeve receive a thick coating of self-extinguishing silicone rubber that withstands liquid metal splash, flame, slag, sparks, and other hazards in the toughest of industrial environments. Standard lengths are 100 feet; specific cut lengths are available. Standard color is iron-oxide red, other colors are available in lot quantity.

**This product is available By-The-Foot or in standard 100 foot lengths**
