

## High Temperature Industrial Tape & Wrap Silicone Rubber Coated Knitted Fiberglass Tape – non adhesive

- Industrial Tape & Wrap, available in 1" width increments up to 5 inches, is made from a knitted base material. This tape has an approximate 5% elongation capability in the lengthwise direction and 15% in the widthwise direction, making for easy installations.
- A Heavy Duty version Tape & Wrap (part number AB-FTHD), available in widths from ½" through 40" wide, is made from our heaviest grade 98 oz/yd<sup>2</sup> woven material. Due to the base material being woven, the FTHD tape has negligible elongation capability in all directions.

500°F / 260°C continuous rating with weld splatter / molten metal splash protection

High Temperature Silicone Rubber Coated Fiberglass Industrial Tape & Wrap – Non Adhesive				
Tape Width inch / mm		Part Number	Price per Roll	Price per Foot
1	25	AB-FT-M025-16	\$ 237.00	\$ 3.55
2	51	AB-FT-M051-32	\$ 391.00	\$ 5.87
3	76	AB-FT-M076-48	\$ 491.00	N/A
4	102	AB-FT-M102-64	\$ 649.00	N/A
5	127	AB-FT-M127-80	\$ 798.00	N/A

Standard length is 100 feet, coiled

High Temperature Tape & Wrap is typically used to wrap hydraulic hoses, lines, cables and wiring when a sleeve cannot be installed. The base fabric is a knitted fiberglass, and provides the tape with a small amount of elongation or stretch capability; which allows the over-wrap to hold tight onto what is being wrapped due to the compression that exists when stretched. Band clamps, wire ties or other fasteners can be used to secure the tape if necessary along the wrapped length or at the end of the wrap. An alternative to using Tape is Sleeve with VC, which is a sleeve with Velcro closure.

**1" and 2" wide tape is available By-The-Foot**
